

Introducing the next generation in data technology: myDBA is web-based business intelligence, delivered through an easy-to-use spreadsheet-like interface, with the capability to readily produce refreshable user-defined reports.

System Architecture

myDBA is a versatile analysis and reporting application designed to be configured to meet a wide range of deployment requirements.

Application Deployment

- Local drive
- Network LAN
- Web-based
- Windows MSI install technology

Hosting

- Application runs in Microsoft IE browser (Internet Explorer)
- Can be hosted in or outside of a web server
- Apache or IIS compliant web server
- Dual-site redundancy with automated failover available

Data Delivery

- Domain, workgroup or peer-to-peer networks
- Web-based delivery (FTP/HTTP)
- Windows and Unix-based networks
- Firewall friendly

Data Sources

- Flat files - such as Excel™, CSV.
- Desktop databases - such as DBase™, FoxPro™, Outlook™
- Relational databases - such as MS SQL™, Oracle™
- Provider based - all ODBC compliant
- Proprietary formats such as SAP™ and QuickBooks™

Security

- Encrypted file formats
- Credentialed access
- Certificate-based oversight

Capacity Specifications

Record Source: File and DB Limits

- Rows - limited only by database engine and local machine resources
- Cube size - limited only by CPU and bandwidth needed to open file
- Approximately 10:1 compression ratio on binary record source
- Approximately 50:1 compression ratio on raw fixed width record source

Library: Maximum number of

- Cubes - 6,000
- Users - 6,000
- Groups - 6,000
- Cubes per group - 250
- Groups per user - 250

Data Cube: Up to specifications

- 2.1 billion displayable rows and or columns
- 32 pivotal fields per data cube layout
- 32 aggregated data fields per cube layout
- 256 bit encrypted proprietary file format
- 50:1 compression ratio on record source

Reports: Maximum number of

- Documents per report - 250
- Rows per document - 60,000
- Columns per document - 250
- Rows per report - 15 million

Unique technology designed to deliver. myDBA leverages all available company resources, from the data of each department and the reporting skills of the individual to the decision-making process of senior management, empowering your analysis and in-depth reporting needs.

Technical Features

Manage data from disparate sources

myDBA includes the critical tools you need to pull it all together.

- Library-based collection management
- Cataloged cube organization
- Modifiable virtual grouping levels
- Integrated role-based security
- Up to 250 data cubes accessible from a single report

Create reports tailored to your business requirements

myDBA user-defined reporting options let you create reports tailored to your business requirements.

- Quick touch document creation
- Personal touch document formatting
- Document to cube synchronization
- Proprietary and exportable formats - such as Excel, Text
- Inheritance report security dissemination
- Disparate data collaboration
- Support for Excel formulas in calculated report fields
- Columns per report - 62,500
- File size - limited only by storage

Analysis driving actionable business decisions

myDBA analyzes your data, turning information into intelligence - pushing history beyond hindsight and turning questions into action.

- OLAP and ad-hoc data analysis
- Drill down data detail
- Drag - drop data aggregation
- Sort, rank and filtering
- Automated date breakouts - such as year, month, week, etc.
- User defined calculated fields
- Percent of display values
- Field display formatting
- Automated query to cube translator
- Selectable aggregation - such as average, sum, count, max
- On-demand and scheduled data refresh
- Configurable analyzer interface - such as, order, visibility, totaling

Product & Plan Offerings

From remote hosting to on-site support, we offer many options for putting myDBA to work for you.

Online Service Agreement Access

A turnkey, web-hosted Business Intelligence solution.

- Hosted 24-7 data server access provided
- Library management included
- Software deployment provided
- Multiple library license package sizes
- Activation pricing down to the single user
- Redundant site failover
- Data delivery using the web
- Integrated software protection plans available

Self Hosted Library License

Total control of your BI Site, myDBA resides 100 percent at your location.

- Data remains on clients server or network
- Application is deployed from client site
- Multiple library license package sizes
- Licenses down to the single user
- 24-7 Data implementation access provided
- System and data stays behind your firewall
- Self-serve software protection plans available

Optional Service Offerings

The following additions are available to meet your service needs.

- Support with online technician access
- On-site up to speed consulting available
- Customized training solutions
